

# In Your Community: Clermont

New York Transco's New York Energy Solution project will modernize electric transmission infrastructure within an existing utility corridor through 11 towns in New York's Hudson Valley. We will replace aging lattice structures with new monopoles and upgrade the transmission lines, alleviating congestion and allowing for a greater flow of renewable energy. Here's a look at what's planned in the Town of Clermont.

**The existing utility corridor runs for 0.7 miles in Clermont** and crosses Turkey Hill Road.

All of the NYES transmission upgrades in Clermont will take place on this utility-owned corridor. Pending regulatory approvals, construction is anticipated to begin in 2022.

## Our Work in Clermont

- Eight existing structures, which sit in pairs, will be replaced with four new single structures. Existing structures are 81-100 feet high (average is 89 feet). New structures will be 91, 92, 97 and 102 feet high (average will be 95 feet).\*
- New structures will carry one existing 115 kV line and a new 345 kV line. The 345 kV line will be on the west side of the structures.

*For illustrative purposes only.*

*\* Structure numbers are preliminary, pending final engineering*
