

# Clean Energy Update

A Project Progress Report – September 2022

## Restoration Underway in Parts of Corridor as Line Work Nears 50% Completion

### Dear NYES Neighbor:

With construction of the new New York Energy Solution transmission line nearing 50% completion, team members in the completed and energized northern areas of the project are busy restoring the land in and around the transmission corridor.

This restoration work is a critical part of New York Transco's commitment to minimizing the impacts of the project to our neighbors and the surrounding environment. Restoration is particularly important in the case of agricultural lands, which make up a large portion of the adjoining properties along this 80-year-old transmission corridor. In a number of cases, crops actually extend onto the utility-owned lands, as you can see in the photo above.

On the back of this letter, you'll find a construction progress report as well as additional project information. Our website, NY-ES.com, is also a great source of up-to-date construction schedules and other project news.

The photos above show how a new crop of corn is sprouting in an area where new monopoles were recently constructed, and provide an up-close look at restoration around a monopole foundation.

If you have questions about NYES, don't hesitate to reach out using the contact information below.

Best wishes for a safe and healthy end to your summer!

Sincerely,

Shannon Baxevanis  
Communications Lead  
New York Transco

# Project Facts

## TRANSMISSION ENABLES CLEAN ENERGY

- New York’s Climate Leadership and Community Protection Act requires the state to transition to **70% renewable energy by 2030** and **100% zero-emissions by 2040**.
- **80% of New York’s transmission infrastructure entered service before 1980** and needs upgrades to carry the necessary amount of clean energy from generators to consumers.

## HOW OUR PROJECT HELPS

**NYES, along with other transmission modernization projects,** will relieve transmission congestion and unlock 2,100MW of clean energy.

- **55-mile project,** in an existing transmission corridor or utility-owned land in 11 towns in 3 counties over a 3-year construction schedule.
- **230 fewer structures** by replacing 686 80-year-old transmission structures with 456 modern, stronger and weather-resistant structures.
- **New 345kV transmission line** to deliver more renewable energy.
- **2 new electric substations, 1 rebuilt, 17 upgraded** — helping deliver clean energy where it’s needed most.

## OUR PROGRESS

**26**  
permits and approvals secured

**56%**  
of new structures erected

**48%**  
of project energized

More than **650,000** consecutive injury-free hours

On schedule for **2023** in-service date

*Progress as of August 25, 2022*

## OUR COMMUNITY IMPACT

- **New York Transco is a New York company leveraging New York labor** through the International Brotherhood of Electrical Workers.
- **Every \$1 invested in transmission generates \$2.40 in economic activity,** which means New York jobs and economic opportunity.
