

Electricity: How it Gets to Your Home

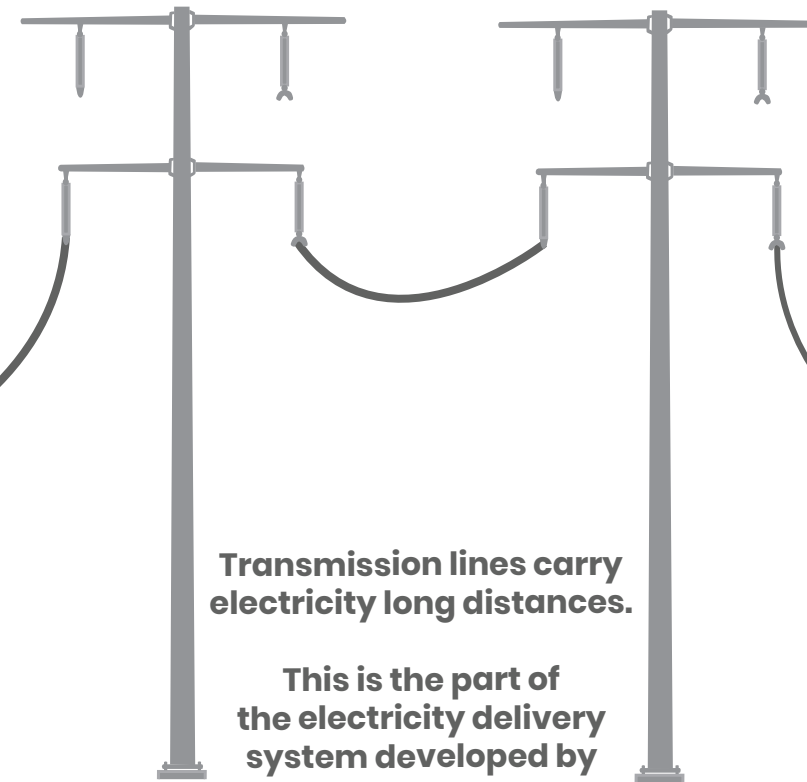

GENERATING SOURCES

NY Going Green!
New York State requires 70% renewable energy by 2030 and 100% carbon-free energy by 2040. New York Transco is proud to help get us there.

Transformer increases voltage of transmission.

TRANSMISSION SYSTEM

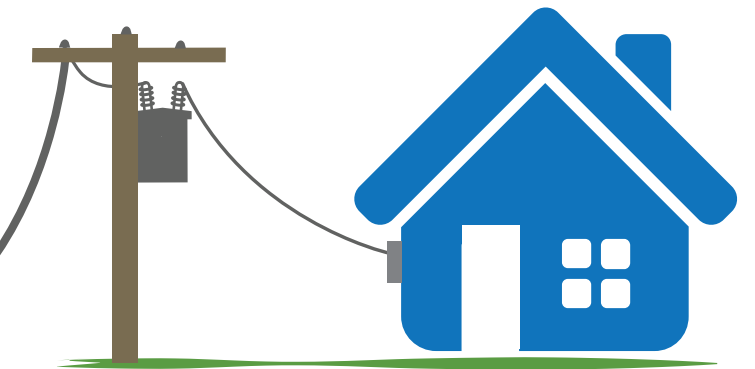

Transmission lines carry electricity long distances.

This is the part of the electricity delivery system developed by

New York Transco

DISTRIBUTION SYSTEM

Distribution lines carry electricity to homes.

Transformer on distribution pole lowers voltage further before electricity enters home.

Local transformer lowers voltage for delivery to customers.
